

IN THE CLAIMS:

Please cancel claims 4-36 without prejudice or disclaimer of the subject matter thereof.

1. (original) A microlens array comprising a substrate and microlenses of a substantially circular profile provided on said substrate and each arranged such that a major axis and a minor axis thereof, which pass through a center of said substantially circular profile and intersect at 90 degrees, are substantially equal in length to each other, and sectional forms at faces vertical to an axis parallel to said major axis or said minor axis are, respectively, made of the same curved shape at any position.

2. (original) A microlens array comprising a substrate, and microlenses provided on said substrate and each having a profile of a substantially circular form and arranged such that a major axis and a minor axis thereof, which pass through a center of said substantially circular form and intersect at 90 degrees, are equal in length to each other, and sectional forms at faces vertical to an axis parallel to said minor axis or said major axis, respectively, have a size of radius at any position.

3. (original) A microlens array comprising a substrate, and microlenses provided on said substrate and each having a profile of a substantially circular form and arranged such that a major axis and a minor axis thereof, which pass through a center of said substantially circular form and intersect at 90 degrees, are equal in length to each other, and sectional forms at faces vertical to an axis parallel to said minor axis or said major axis are, respectively, made of a given aspheric shape.
